Crop protection :: IPM :: Cardamom

Integrated pest management of cardamom

Cultural

- Destroy rhizomes infested with immature stages of the weevil
- Avoid planting banana inside the cardamom plantation and destroy host plant like Colocasia and Alocasia to control aphid infestation
- Cultivar Malabar variety, resistant to thrips. The hybrid Vazhukla is moderately resistant

Biological

- Field release of parasitoids *Xanthopimpla australicus*, pupal parasite of shoot borer
- *Beauveria* sp (white fungus) on hairy caterpillar
- *Verticillium enterotextum* (Fungus) on aphids
