Crop protection :: IPM :: Millets

The following practices are adopted to reduce the pest populations in millets

- Sorghum
- Maize
- Cumbu
- Finger millet

Cultural

- Summer ploughing
- Antiqua Gr I variety of maize is comparatively more resistant to infestation of stem borer

Chemical

- Shoot fly can be controlled with furrow application of phorate 10 G at 25 kg/ha
- Soil application of phorate 10G at 25 kg/ha for white grub control

Biological

- Egg – *Trichogramma* and *Telenomus*
- Larval – *Apanteles*, *Bracon chiensis*
- Pupal – *Tetrastichus ayyari*
