Crop protection :: IPM :: Pepper

Integrated pest management of pepper

Cultural

- Hoe the soil under the vines in Sept – Oct and Dec – Jan to destroy the pupae of pollu beetle in soil
- Use of resistant varieties line Uthirankotta 1 and II, TMB V and Shimoga against pollu beetle

Chemical

- Spray of dimethoate or quinalphos 0.1% in late June and early Oct.
- Top shoot borer can be controlled by the spray of dimethoate or phosphomidon 0.05%.
- Spray with malathion 0.1% or dimethoate 0.05% to keep gall forming thrips population under check

Biological

- Field release of parasites like *Apanteles* sp, *Eduderus* and *Goniozus* are effective in reducing the top shoot borer incidence
